DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/31/2008 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Larry Baratta on 6/16/2008.

The application has been amended as follows:

Claim 1. (Currently Amended) A computer implemented ~~mechanism~~ method for dynamically constructing a network element management system, comprising:

executing a core application, the core application comprising NE element-independent Version Independent functionality that can be invoked to interact with any network element, wherein NE element-independent Version Independent functionality comprises the core application containing no code specific with any network element and code related to general functionality for interaction with any network element;

receiving an indication of a particular network element to be managed;

obtaining a description of the particular network element, which specifies one or more characteristics of the particular network element;

Art Unit: 2145

accessing, based upon the description, a set of one or more element-dependent modules, the set of element-dependent modules comprising functionality for invoking one or more management services provided by the particular network element;

dynamically incorporating at least a portion of the set of element-dependent modules with the core application to derive a management system capable of managing the particular network element; and

managing the particular network element with the management system with the set of element-dependent modules and the core application, wherein the managing comprises utilizing remove invocation mechanisms comprising one of HTTP, SNMP, TCP/IP, CORBA, RPC, JAVA, and RMI, and wherein the element-dependent modules enable the core application to invoke specific services provided by the particular network element.

Claim 29. (Canceled)

Claim 30. (Canceled)

3. The following is an examiner's statement of reasons for allowance:
4. Applicant has claimed a network management system. The particularly claimed system is able to work with ANY network element. The particularly claimed system possesses NO code associated specifically with ANY network element. Applicant claimed a network management system that works universally with all network elements, even if those network elements are based solely on proprietary code, because Applicant's system contains NO code associated specifically with ANY network element and because Applicant's system works with ANY network element. This technological breakthrough which allows a system to communicate with a disparate element which is dependent upon proprietary language, is not taught in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2145
